A Interest rate risk

The tables below summarise the Bank's exposure to interest rate risks. Included in the tables are the Bank's assets and liabilities at carrying amounts, categorised by the earlier of contractual repricing or maturity dates. The off-balance sheet gap represents the net notional amounts of all interest rate sensitive derivative financial instruments. As interest rates and yield curves change over time the Bank may be exposed to a loss in earnings due to the effects of interest rates on the structure of the balance sheet. Sensitivity to interest rates arises from mismatches in the repricing dates, cash flows and other characteristics of the assets and their corresponding liability funding.

C Credit risk

Credit risk arises from the possibility that a counter-party may be unable to meet the terms of a contract in which the Bank has a gain position. The credit risk numbers as at 30 September 2013 are reflected in Note 31 on Capital Adequacy. The credit risk amount will increase or decrease over the life of the contracts, mainly as a function of maturity dates and market rate or prices.

D Liquidity risk

Liquidity risk is the risk that the Bank is unable to meet its cash flow obligations as they fall due, such as upon the maturity of deposits and loan draw downs. Exposure to liquidity risk is reduced through constant monitoring of liquidity risk profile with maturity mismatch reports.
