

Bank of America, N.A Bangkok Branch
Basel III Pillar III Disclosures
Reported as of December 31, 2025

Bank of America, N.A, Bangkok Branch

Basel III Pillar III Disclosures

Disclosure A: Scope of Application

The Basel III – Pillar III Disclosures contained within this document, relate to the Bangkok Branch of Bank of America, N.A., (hereafter referred to as “BANA – Bangkok” or the “Bank”) for the period ended December 31, 2025. These disclosures are in compliance with the requirements as set forth by the Bank of Thailand (“BOT”) notification no. SorNorSor 4/2556 Re: Information Disclosures Regarding Capital Fund Maintenance, dated May 2, 2013 and the Bank of Thailand (“BOT”) notification no. SorNorSor 14/2562 Re: Capital Disclosure Requirements for Commercial Banks (No.2).

Bank of America Corporation (“BAC” or the “Corporation”) has a subsidiary, Bank of America, N.A. (“BANA”), and BANA - Bangkok is a foreign branch of BANA. Additional disclosures made by BAC that pertain to BANA may be found in the Part II – Item 7 Management’s Discussion and Analysis of Financial Condition and Results of Operations as well as in the Part II – Item 8 Financial Statements and Supplementary Data of the Corporation’s Annual Report on Form 10-K filed on March 25, 2026.

Disclosure AA: Key prudential metrics

Qualitative Disclosure:

The Bank assesses expected credit loss on a forward-looking basis for its financial assets carried at FVOCI and at amortised cost. The impairment methodology applied depends on whether there has been a significant increase in credit risk, except other receivables which the Bank applies the simplified approach in determining its expected credit loss.

To measure the expected credit losses, interbank and money market items, investments in debt instruments measured at fair value through other comprehensive income, other receivables, and employee loans have been grouped based on shared credit risk characteristics and the days past due.

For interbank and money market items, other financial assets carried at amortised cost, FVOCI, loans commitments, and financial guarantees, the Bank applies TFRS 9 general approach in measuring the impairment of those financial assets. Under the general approach, the 12-month or the lifetime expected credit loss is applied depending on whether there has been a significant increase in credit risk since the initial recognition.

The significant increase in credit risk (from initial recognition) assessment is performed every end of reporting period by comparing a) expected risk of default as of the reporting date and b) estimated risk of default on the date of initial recognition.

The Bank assesses expected credit loss by taking into consideration forward-looking information and past experiences. The expected credit loss is a probability-weighted estimate of credit losses (probability-weighted present value of estimated cash shortfall). The cash shortfall is the difference between all contractual cash flows that are due to the Bank and all cash flows expected to receive, discounted at the original effective interest rate.

When measuring expected credit losses, the Bank reflects the following:

- probability-weighted estimated uncollectible amounts
- time value of money; and
- supportable and reasonable information as of the reporting date about past experience, current conditions and forecasts of future situations.

Impairment losses are recognised in profit or loss as a separate line item in expected credit loss.

The Bank measures the surplus reserve on the date of adoption for new financial reporting standards related to financial instruments by comparing the difference between allowance for expected credit losses according to requirement under new financial reporting standards related to financial instruments and total reserves that the Bank had on 31 December 2019. In which, the Bank will amortise the surplus reverse using the straight-line method over 5 years in accordance with notification number TorPorTor ForNorSor (23) Wor 1603/2562 to utilize surplus reserve from Bank of Thailand dated on 6 November 2019.

Disclosure B: Capital

Item 1: Capital Structure

Qualitative Disclosure:

BANA - Bangkok is a branch of a foreign bank, BANA. Total capital of BANA - Bangkok consists of assets maintained under Section 32 reduced by items deductible from capital as set forth by Bank of Thailand notification no. SorNorSor 8/2562 Re: Capital Components for Foreign Bank Branches, dated May 7, 2019.

As of December 31, 2025, total regulatory capital was THB 15,921.59 million. Total assets maintained under Section 32 of the Financial Institutions Businesses Act B.E. 2551 were THB 16,637.22 million, in which comprised of Treasury Bills and Central Bank Bonds.

Bank of America, N.A, Bangkok Branch

3.2 Deductions	78,407,419.78	42,978,987.78

Item 2: Capital Adequacy

Qualitative Disclosure:

BANA - Bangkok is required to calculate and report its capital adequacy ratio for regulatory reporting purposes to Bank of Thailand ("BOT") on a monthly basis. Per the BOT's requirements, BANA - Bangkok is required to maintain a minimum Capital Adequacy Ratio of 11% (including capital conservation buffer of 2.5%), effective January 1, 2019. The Branch has also set an internal threshold above the minimum required by the BOT.

The capital adequacy position of BANA - Bangkok is reviewed and monitored on a monthly basis by the financial controller and the Local Management Team ("LMT"). The Asset and Liability Council ("ALCO") is also responsible for the ongoing monitoring of capital adequacy. The LMT and ALCO actively monitor the Branch's capital position to ensure capital is maintained at or above the internal threshold.

The LMT is responsible for ensuring branch compliance with the Corporation's policies, procedures and corporate governance practices including those relating to Basel III. The LMT is headed by the BANA Bangkok Country Executive with other members including representatives from the Lines of Business, Treasury, Risk and Operations.

The ALCO is responsible for management oversight of BANA-Bangkok's balance sheet, capital, liquidity management and stress testing activities. The ALCO is chaired by the Branch Treasurer, with members including International EFR Manager, APAC Liquidity Manager, BANA Bangkok Branch Manager, Representative of Corporate Banking, Representative of Global Markets Group, Representative of Global Payment Services, Representative of Enterprise Capital Management ("ECM"), Thailand Finance Manager, and Thailand Country Risk Manager.

Bank of America, N.A, Bangkok Branch

Basel III Pillar III Disclosures

Quantitative Disclosure:

As of December 31, 2025, BANA - Bangkok had total regulatory capital of THB 15,921.59 million, above the total minimum capital required of THB 8,752.02 million, which equals 11% of total risk weighted assets (a minimum Capital Adequacy Ratio of 11% is including capital conservation buffer of 2.5%). The Basel III - Capital Adequacy Ratio (CAR) was 20.01% on total risk weighted assets of THB 79,563.78 million.

C. Total Risk-Weighted Capital Ratio (Bank of Thailand requirement 4-2556: Table 8)

Unit : %

Ratio	31-Dec-25		30-Jun-25	
	Capital ratio of the bank	Minimum capital ratio according to the BOT regulations	Capital ratio of the bank	Minimum capital ratio according to the BOT regulations
Total Capital to Risk-Weighted Assets Ratio	20.01 %	11.00 %	19.02 %	11.00 %

Minimum Capital Requirement for Credit Risk Classified by Type of Assets under Standardized Approach

Credit risk is defined as the potential risk of financial loss arising from the failure of a customer or counterparty to settle its financial and contractual obligations. The extension of commercial credit by BANA - Bangkok includes products and facilities such as loans, due from placements with banks, overdrafts, trade finance, off balance sheet facilities such as guarantees and letters of credit, and FX & OTC Derivatives.

BANA - Bangkok is using the Standardised Approach ("SA") for credit risk as measured according to Basel III. Under the Standardised Approach for credit risk, BANA - Bangkok uses external credit ratings from Standard & Poor's, Moody's, and Fitch Ratings to assign risk weights for capital adequacy purposes.

As of December 31, 2025, the credit risk capital requirement was THB 3,432.55 million, which was 39.22% of the total capital requirement of THB 8,752.02 million.

** Effective July 2024, in accordance with the Bank of Thailand Notification no. SNS.9/2566, BANA Bangkok Branch applies the current method for calculating CVA RWA, equal to 100% of FI counterparty credit risk RWA from OTC Derivatives exposures, to be implemented in a phased manner over 4 years from 25% on 1 July 2024, 50% on 1 January 2025, 75% on 1 January 2026, and 100% on 1 January 2027. The resulting amount is incorporated into the total credit risk RWA. The minimum capital requirement related to CVA RWA is included in Item #2 of this table, totaling THB 656.40 million as of December 31, 2025 .

*** Non-Performing Assets were nil as of December 31, 2025 and June 30, 2025.

Minimum Capital Requirement for Market Risk under Standardized Approach

Market risk is the risk that values of assets and liabilities or revenues will be adversely affected by changes in market conditions, such as interest rate movements, currency exchange rates and security prices. BANA - Bangkok is using the Standardized Approach for market risk.

As of December 31, 2025, the market risk capital requirement was THB 4,880.98 million, which was 55.77% of the total capital requirement of THB 8,752.02 million.

E. Minimum capital requirement for market risk for positions in the trading book (Bank of Thailand requirement 4-2556: Table 6)

Basel III Pillar III Disclosures

Minimum Capital Requirement for Operational Risk under Basic Indicator Approach

BANA - Bangkok is using the Basic Indicator Approach (“BIA”) for operational risk as measured according to Basel III.

As of December 31, 2025, the operational risk capital requirement was THB 438.49 million, which was 5.01% of the total capital requirement of THB 8,752.02 million.

F. Minimum capital requirement for operational risk (Bank of Thailand requirement 4-2556: Table 7)

Unit : THB

	31-Dec-25	30-Jun-25
Basic Indicator Approach	438,489,503.60	426,671,109.76

Disclosure C: Other Risk Exposures and Assessment

1. General Qualitative Disclosure

BANA - Bangkok’s largest risk exposures relate to credit risk and market risk. The LMT is accountable for all aspects of governance and oversight involved with the management of risk in BANA - Bangkok. This relates to ensuring that adequate structures are in place for proper oversight, communication, review and understanding of risk and governance issues. The LMT, working with the Lines of Business (“Businesses”) and Risk Groups within BANA-Bangkok, are responsible for ensuring that the risk management processes are being carried out appropriately in light of the risk profile and business plan as defined by the BANA - Bangkok LMT.

Furthermore, the LMT is responsible for understanding the nature and level of risks being taken by BANA - Bangkok and whether these risks are sufficiently covered by its capital resources. A dashboard report is presented in the monthly LMT meetings provides an analysis of the following:

- The level and trend of material risks and their effect on capital levels, especially credit, market and operational risk. Highlight transactions that have affected the direction of the BANA – Bangkok’s CAR. It will also recommend courses of action to minimize significant fluctuations and unexpected events, if any; and
- The sensitivity and reasonableness of the capital requirements and recommend adjustments to BANA - Bangkok’s strategic focus and business plan, if necessary

BANA-Bangkok has established processes for the management of all the risks it faces. It has a robust risk governance framework. The key components within the Bank’s risk management framework include:

- Identification of all risks that are relevant to BANA-Bangkok based on its current activities as well as new products and initiatives;
- Measurement, monitoring and reporting of key risks to the Local Management Team (LMT) on a monthly basis; and
- A robust control environment to monitor whether the various policies and limits are being adequately implemented and aligned to its activities.

Led by Corporate General Auditor, Corporate Audit is a global team responsible for providing independent assessments of business activities throughout Bank of America. The group supports how BAC manages risk by determining whether controls over key risks are in place and functioning properly. Corporate Audit reports directly to the Audit Committee of the Board of Directors to maintain independence.

Bank of America, N.A, Bangkok Branch

Basel III Pillar III Disclosures

II. Qualitative and Quantitative Disclosure for each type of risk

1. Credit Risk Disclosure

Item 1: General disclosures of credit risk exposures*

Qualitative Disclosure:

Credit risk is the risk of loss arising from the inability or failure of a borrower or counterparty to meet its obligations. Economic or market disruptions and insufficient credit loss reserves may result in a higher provision for credit losses. A number of our products expose us to credit risk, including loans, letters of credit, derivatives.

The Bank manages credit risk within its risk appetite utilizing four processes:

- **Credit origination:** We oversee decisions about the amount of credit to extend to borrowers consistent with our credit risk appetite. We assess borrowers' credit risk profiles through risk modeling, underwriting and asset analysis, while considering current and forward-looking views on economic, industry and borrower outlooks to ensure portfolio asset quality within front line units and certain legal entities remains within approved credit risk limits.
- **Portfolio management:** Once credit has been extended, processes are in place to monitor credit risk exposure at both the individual borrower and portfolio levels. We assess our key credit risk exposures under both normal and stress scenarios and manage our credit risk primarily through establishing limits and monitoring usage. We may hedge our exposure to mitigate credit risk and remain within our credit risk appetite.
- **Loss mitigation activities:** At times, our borrowers and counterparties do not fulfil their obligations and we take steps to mitigate and manage our losses. We have teams and stringent processes in place to appropriately handle nonperforming loans, collections and loan modifications.
- **Establishing our Allowance for Credit Losses:** We maintain a reserve or an Allowance for Credit Losses against expected credit losses, based on portfolio performance, asset quality forecasts and emerging risks.

BANA-Bangkok is governed by BOT Regulations and BAC's Global Core Credit Policy which actively manages concentrations in relation to the credit risk it undertakes by placing limits on the amount accepted. Limits are reviewed annually or more frequently when considered necessary. Actual exposures against limits are monitored regularly. In addition, BANA-Bangkok must comply with BOT's single lending limits.

Definition of past due and impairment

As per Bank of Thailand notification no. SorNorSor 5/2559 dated June 10, 2016, which was replaced by SorNorSor 23/2561 dated October 31, 2018, Loans are past due when payment in full has not been received by the due date. Impaired loans include commercial loans that are on nonaccrual status. Loans are generally placed on nonaccrual status when either principal or interest becomes 90 days past due or payment in full of principal or interest is not expected.

Per Bank of Thailand notification no SorNorSor 23/2561, dated October 31, 2018, effective January 1, 2020, the Bank assesses expected credit loss on a forward looking basis for its financial assets carried at FVOCI and at amortised cost. The impairment methodology applied depends on whether there has been a significant increase in credit risk, except interbank and money market items, investments in debt instruments measured at fair value through other comprehensive income, other receivables, and employee loans which the Bank applies the simplified approach in determining its expected credit loss.

The Bank measures loss allowances at an amount equal to 12-month ECL for financial instruments on which credit risk has not increased significantly since their initial recognition. Loss allowances for financial instruments where there has been a significant increase in credit risk are measured at lifetime ECL.

12-month ECL are the portion of ECL that result from default events on a financial instrument that are possible within the 12 months after the reporting date. Lifetime ECL are the expected credit losses that result from all possible default events over the expected life of the financial instrument.

Item 2: Credit risk exposures classified by credit risk-weighted assets calculation approach chosen by commercial banks

2.1 Credit risk exposures under the SA

Qualitative Disclosure:

BANA - Bangkok uses external credit ratings from Standard & Poor's, Moody's and Fitch Ratings to assign risk weights for capital adequacy purposes according to BOT Notification no. SorNorSor 9/2562 RE: Regulations on the Calculation of Credit Risk-Weighted Assets for Commercial Banks under the Standardized Approach (SA), dated May 7, 2019.

Effective from the credit risk reporting period ending December 2023, the Bank changed its selected External Credit Assessment Institution ("ECAI") from Tris Rating Co., Ltd. to Fitch Ratings. The change was formally notified to the Bank of Thailand in 2024 and remained in effect throughout the year ended 31 December 2025.

The Branch assigns 100% risk weighting to all unrated corporate exposures. Risk weighting of Banks and rated corporate exposures have been assigned in accordance with sovereign and corporate rating assigned by third party ECAIs, following the BoT's rating selection rule as prescribed in the attachment 4 - Regulations on the Use of Credit Ratings from External Credit Assessment Institutions under BOT Notification no. SorNorSor 9/2562 RE: Regulations on the Calculation of Credit Risk-Weighted Assets for Commercial Banks under the Standardized Approach (SA), dated May 7, 2019.

Basel III Pillar III Disclosures

2. Disclosure on market risk for trading book position

Item 4: Market Risk Exposure

Item 4.1: Market Risk under Standardized Approach

Qualitative Disclosure:

BANA - Bangkok calculates its capital charge for market risk by using the Standardized Approach as per Bank of Thailand notification no. SorNorSor 94/2551 Re: Guideline on Supervision of Market Risk and Capital Requirement for Market Risk of Financial Institutions, dated November 27, 2008.

As per BOT's definition, banks with the average amount of THB-equivalent transactions in a trading book of all currencies over the last 6 months, July to December 2019, of over THB 3,000 million, are considered to have significant positions in the trading book and are required to maintain capital for market risk associated with the following:

- 1) Interest Rate Risk
- 2) Equity Position Risk
- 3) Foreign Exchange Rate Risk
- 4) Commodity Risk

For BANA - Bangkok, market risk is the risk that changes in market conditions adversely impact the value of assets or liabilities or otherwise negatively impact earnings which is inherent in financial instruments we have exposure to through our operations and activities. This risk occurs most significantly from market-making and dealing activity in interest rate and foreign exchange markets. BANA – Bangkok has no equity or commodity positions.

Quantitative Disclosure:

Minimum Capital Requirement of each type of market risk under Standardized Approach

As of December 31, 2025, the market risk capital requirement was THB 4,880.98 million, which was 55.77% of the total capital requirement of THB 8,752.02 million. As of December 31, 2025 and June 30, 2025, capital charged for interest rate risk and foreign exchange rate risks were as follows.

I. Minimum capital requirements for each type of market risk under the Standardized Approach (Bank of Thailand requirement 4-2556: Table 30)

Unit: THB

	31-Dec-25	30-Jun-25

Bank of America, N.A, Bangkok Branch

Basel III Pillar III Disclosures

3. Disclosure on operational risk

Item 5: Operational Risk Exposure

Item 5.1: Operational Risk under Basic Indicator Approach

Qualitative Disclosure:

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people, and systems or from external events. BANA - Bangkok calculates its capital charge for operational risk by using the BIA as per BOT notification no. SorNorSor. 95/2551 Re: Guidelines on Minimum Capital Maintenance for Operational Risk. By utilizing the BIA to measure operational risk, BANA - Bangkok utilizes the average of three years adjusted gross income multiplied by a predefined factor (15%) resulting in required capital of THB 318.90 million at December 31, 2025, which was 5.01% of the total capital requirement of THB 8,752.02 million.

Year	Adjusted Gross Income	
	31-Dec-25	30-Jun-25
Year 1 (Jan'25 - Dec'25)	2,101,434,901.30	
Year 2 (Jan'24 - Dec'24)	2,397,982,604.30	
Year 3 (Jan'23 - Dec'23)	1,878,611,637.60	
Year 1 (Jul'24 - Jun'25)		1,775,331,167.00
Year 2 (Jul'23 - Jun'24)		2,365,470,410.19
Year 3 (Jul'22 - Jun'23)		2,065,323,655.72
Averaged Adjusted Gross Income	2,126,009,714.40	2,068,708,410.97
Total Operational Risk-Weighted Assets	3,986,268,214.50	3,878,828,270.57

4. Disclosure on equity exposures

Item 6: Equity exposures in the banking book

BANA - Bangkok does not have any equity exposures in its banking book.

5. Disclosure on interest rate risk in banking book

Item 7: Interest rate risk exposure in banking book

Qualitative Disclosure:

Interest Rate Risk in the Banking Book ("IRRBB")

IRRBB represents risk to current or anticipated earnings or capital arising from the banking book due to movements in interest rates.

How We Manage IRRBB

The Treasurer is responsible for managing IRRBB within Earnings at Risk ("EaR") and Economic Value of Equity ("EVE") Risk Metric Framework established by Enterprise Financial Risk (EFR) in accordance with International Interest Rate and Credit Spread Risk ("IR&CS Risk") Policy applicable to international jurisdictions. Treasury utilizes ALCO approved hedging strategies to manage IRRBB.

Bank of America, N.A, Bangkok Branch

Basel III Pillar III Disclosures

How We Govern IRRBB

The governance and oversight for IRRBB in BANA Bangkok is the responsibility of the ALCO and senior management while the day-to-day management of IRRBB is the responsibility of the Treasurer, who reports functionally into the regional Treasurer. A separate team within Treasury, Balance Sheet Management (BSM), has the regional responsibility to support the Treasurer by measuring IRRBB. EFR is an independent regional team that report into the risk management organization. EFR provides a second line of defense for BANA Bangkok. EFR oversees related governance structures, policies and limits, assessing the reasonableness of Treasury's key IRRBB assumptions, scenarios and measurement results, while ensuring effective escalation of issues, risks and limit breaches to Governance Committees, as necessary

How We Report IRRBB

IRRBB is measured with two complementary frameworks - Earnings at Risk (EaR) and Economic Value of Equity (EVE).

Changes in interest rates affect BANA Bangkok's earnings and capital by impacting its projection of Earnings at Risk ("EaR") and the underlying economic value of its assets, liabilities and off-balance sheet items (economic value of equity ("EVE")). Changes in economic value occur because the present value of future cash flows and in many cases the cash flows themselves, change when interest rates change.

The Bank measures EaR by evaluating the gain or loss on interest rate sensitive positions as a result of different interest rate environments. The EaR measure takes into account a constant balance sheet over a one-year horizon and the projected forward path of interest rates.

The EVE framework measures long-term Interest Rate Risk by incorporating both interest and principal cash flows and extends the measurement horizon up to thirty years. The EVE metric computes the change in the balance sheet's present value of the remaining life in a run-off view, measuring how different interest rate environments impact the company due to variations in the economic value of assets, liabilities and derivatives and their associated principal and interest cash flows.

This assessment is performed by BSM with results shared with stakeholders including the Treasurer, EFR and presented quarterly at ALCO meetings.

IRRBB Risk Indicators, Tripwires and Limits

IRRBB Risk Indicators, Tripwires and Limits are established to monitor and control IRRBB. These metrics are reviewed annually by EFR together with Treasury. Limits, Tripwires and Risk Indicators are established in accordance with internal policy requirements. Limit and Tripwire breaches are escalated by Treasury in accordance with International IR&CS Risk Policy applicable to international jurisdictions.
