- 2. Risk exposure and assessment
- 3. Composition of Capital disclosure

## Basel III Pillar 3 Disclosures

## Table DF-1: Scope of Application

Name of the entity to which the framework applies: Bank of America N.A. (India branches)

The Basel III Pillar 3 disclosures contained herein relate to Bank of America, N.A. – India Branches (hereafter referred to as the "the Bank" or "BANA India") for the period ended Sep 30, 2023. Bank of America Corporation ("BAC" or "the Company") has a subsidiary, Bank of America, N.A. ("BANA U.S.") into which BANA India is consolidated. The Pillar 3 disclosures are compliant with Reserve Bank of India (the "RBI") Master circular DOR.CAP.REC.15/21.06.201/2023-24 on BASEL III Capital Regulations dated May 12,2023 and amendments if any made from time to time. The minimum capital requirement (including G SIB buffer) stands at 14.0% as of Sep 30, 2023.

## Basel III Pillar 3 Disclosures

#### I. Qualitative disclosures:

The provisions of Accounting Standard ("AS") 21 - Consolidated Financial statements, AS 23 Accounting for Investments in Associates in Consolidated Financial statements & AS 27 - Financial Reporting of Interest in Joint Ventures, issued by The Institute of Chartered Accountants of India ("ICAI") and notified by the Companies (Accounting Standards) Rules 2006 do not apply to the Bank. BANA India has not invested its capital in any of the entities operating in India and owned by BAC. Further, the Bank does not have any interest in insurance entities. Hence the qualitative disclosures are only made for BANA India as a standalone entity.

#### a. List of group entities considered for consolidation.

Name of the entity / Country of incorporation	Whether the entity is included under accounting scope of consolidation (yes / no)	Explain the method of consolidatio n	Whether the entity is included under regulatory scope of consolidation (yes / no)	Explain the method of consolidatio n	Explain the reasons for difference in the method of consolidation	Explain the reasons if consolidated under only one of the scopes of consolidation	
Not Applicable							

## b. List of group entities not considered for consolidation both under the accounting and regulatory scope of consolidation.

Name of the entity / Country of incorporation	Principle activity of the entity	Total balance sheet equity (as stated in the accounting balance sheet of the legal entity) INR Million*	% of bank's holding in the total equity	Regulatory treatment of bank's investments in the capital instruments of the entity	Total balance sheet assets (as stated in the accounting balance sheet of the legal entity) INR Million*
BofA Securities India Limited (formerly DSP Merrill Lynch Limited) / India *	Securities Broker/Dealer and Merchant Banker	35,354	NIL	Not Applicable	50,325

<sup>\*</sup> Amounts are as per last audited financial statements (F.Y. ending March 31, 2023)

## Basel III Pillar 3 Disclosures

#### II. Quantitative disclosures

c. List of group entities considered for consolidation.

Name of the entity / country of incorporation (as indicated in (i)a. above)	Principle activity of the entity	Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)	Total balance sheet assets (as stated in the accounting balance sheet of the legal entity
		Not Applicable	

d. The aggregate amount of capital deficiencies in all subsidiaries which are not included in the regulatory scope of consolidation i.e. that are deducted:

Name of the subsidiaries / country of incorporation	Principle activity of the entity	Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)	% of bank's holding in the total equity	Capital deficiencies		
Not Applicable						

e. The aggregate amounts (e.g., current book value) of the bank's total interests in insurance entities, which are risk-weighted:

Name of the insurance entities / country of incorporation	Principle activity of the entity	Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)	% of bank's holding in the total equity / proportion of voting power	Quantitative impact on regulatory capital of using risk weighting method versus using the full deduction method			
Not Applicable							

**f. Any restrictions or impediments on transfer of funds or regulatory capital within the banking group:** Disclosures for BANA India are given as a standalone entity and therefore this disclosure requirement is not applicable.

## Basel III Pillar 3 Disclosures

### Table DF-2: Capital Adequacy

#### I. Qualitative disclosures

The Bank is required to comply with all applicable laws and regulations in India including guidelines issued by RBI and other relevant regulatory bodies.

The Internal Capital Adequacy Assessment Process ("ICAAP") document assesses the capital adequacy for the Bank and details the process by which this assessment is made based on a reference date and looking forward, over a three-year planning horizon ("ICAAP Planning Horizon").

ICAAP establishes a framework for banks to perform a comprehensive assessment of the risks they face and relate capital to those risks. The capital analysis performed by the Bank is expected to encompass all risks, not just the risks captured by the Basel III Pillar 1 minimum regulatory capital calculation. Successful risk identification and measurement requires having a comprehensive process to quantify measure and aggregate these various risks to ensure that the Bank's capital resources are sufficient to cushion volatility in earnings due to unexpected losses.

The authority to develop the ICAAP document is delegated to the Finance department. The Bank's Chief Financial Officer ("CFO") is responsible for the production of ICAAP with inputs from Front Line Units ("Businesses" or "Business"), Independent Risk Management and Control Functions. Enterprise-wide functions, including Global Markets and Financial Risk ("GMFR") and Enterprise Capital Management ("ECM") also review the ICAAP to ensure adequate challenge and consistency with Enterprise practices.

The Bank has established an Internal Capital Guideline ("IGL") and maintains capital levels in excess of this guideline. Bank has set up a "Tripwire" above the IGL to serve as an early warning signal to prompt action and avoid a capital breach.

The ICAAP document is presented to the Asset Liability Council ("ALCO") and the Local Management Team ("LMT") for final review and approval on an annual basis. The ICAAP is also validated by Corporate Audit periodically, as required under RBI guidelines.

ICAAP is an integral management tool for determining the adequacy of the Bank's capital resources throughout the ICAAP planning horizon. It is also utilized to assess the risks being faced by the Bank and assess the adequacy of BANA India's capital under Baseline as well as Stress Scenarios over the ICAAP Planning Horizon. The ALCO and the LMT are responsible for acting at an early stage to prevent capital from falling below the minimum levels required to support risk characteristics.

#### Capital Requirements for Pillar 1 risks (i.e., Credit Risk, Market Risk and Operational Risk)

The Bank has adopted Standardized Approach ("SA") for credit risk, Standardized Duration Approach ("SDA") for market risk and Basic Indicator Approach ("BIA") for operational risk for computing its capital requirement.

Under the SA for credit risk, the Bank relies upon the ratings issued by the external credit rating agencies specified by the RBI for assigning risk weights for capital adequacy purposes under the Basel III guidelines. The risk weights applicable for claims against banks, sovereign, corporate and other Assets are as per the Basel III guidelines. In compiling the credit exposures, the Bank has availed Credit Risk Mitigation techniques (CRM) to the extent of securities placed under section 11(2) (b) of Banking Regulation Act 1949 for offsetting gross exposure of BANA Head office and overseas branches as per RBI Circular on Large Exposures Framework – CRM for offsetting – non-centrally cleared derivative transactions of foreign bank branches in India with their Head office dated Sept 9, 2021 Under the SDA for computing the capital requirement for market risk, the Bank has adopted the "duration" method.

## Basel III Pillar 3 Disclosures

The minimum capital requirement for market risk is computed in terms of:

- a. "Specific risk" charge for each security, to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer.
- b. "General market risk" charge towards interest rate risk in the portfolio, where long and short positions in different securities or instruments can be offset.

Under the BIA, the Bank holds capital for operational risk equal to 15% of average positive gross annual income for the previous three financial years.

#### II. Quantitative disclosures

#### **Capital Structure as on**

INR Million	30-Sep-23	31-Mar-23

Tier II capital ratio	1.50%	1.43%
Total capital ratio	19.19%	19.82%

Note: The capital reflected above excludes capital infused for CRM purposes.

## Basel III Pillar 3 Disclosures

### **Risk Exposure and Assessment**

Risk management is a disciplined approach to identify, analyse, assess, and control unacceptable risk to minimize the volatility of financial results, drive sustainable earnings and protect the Bank's brand and reputation. The Bank takes a comprehensive approach to risk management, integrating it with strategic, capital, and financial operating plans. Risk management and capital utilization are integral parts of the strategic planning process and are considered throughout the process to align the Business strategies with capital considerations and risk appetite of the bank. The Risk Appetite is in alignment with the Bank's business strategy and is also integrated with the annual BANA India ICAAP which is a key document to review strategic plans.

This holistic approach promotes the risk versus reward analysis needed to make informed strategic and business decisions.

Bank of America's Risk Framework requires that strong risk management practices are integrated in key strategic, capital and financial planning processes and in day-to-day business processes, thereby ensuring risks are appropriately considered, evaluated and responded to in a timely manner. The front-line units have primary responsibility for managing risks inherent in their businesses. BAC employs an effective risk management process, referred to as Identify, Measure, Monitor and Control (IMMC), as part of its daily activities.

Some of the risks that the Bank is exposed to are described below:

Credit risk is the risk of loss arising from the inability or failure of a borrower or counterparty to meet its obligations. BANA India manages credit risk to a borrower or counterparty based on its risk profile, which includes assessing repayment sources, underlying collateral, if any, and the expected effects of the current and forward-looking economic environment on the borrowers or counterparties. Underwriting, credit management and credit risk limits are proactively reassessed as a borrower's or counterparty's risk profile changes. Credit risk appetite metrics are included as part of the BANA India risk appetite metrics

Market risk is the risk of loss due to changes in the market values of the Bank's assets and liabilities caused by changing interest rates, currency exchange rates, and security prices. Market risk is inherent in the Bank's operations and arises from both trading and non-trading positions. Trading exposures represent positions taken in a wide range of financial instruments and markets which expose the Bank to various risks, such as interest rate risk, foreign exchange risk, etc. The Bank manages these risks by using trading strategies and other hedging actions which encompass a variety of financial instruments in both the cash and derivatives markets. Key market risk exposures are assessed at both specific and aggregate levels. At the specific level, market risk sensitivities are assessed by evaluating the impact of individual risk factors such as interest rates and foreign exchange. At the aggregate level, market risk is assessed using two key measures, which are Value-at-Risk ("VaR") and 10 Day Stressed Value at Risk ("SVaR"). both these measures are monitored as a part of the BANA India Risk Appetite Metrics.

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people, and systems or from external events. BANA India manages the operational risks of its business activities using the enterprise-wide Operational Risk Framework. Enterprise Operational Risk policies, processes, tools, and standards are implemented by the Businesses/ECFs with Oversight from the Independent Business/ECF Risk Teams (Regional Function). Each have a quality assurance role and through direct action or Oversight, these

## Basel III Pillar 3 Disclosures

stakeholders are collectively responsible for execution of the Operational Risk Program requirements, achievement of risk management objectives, and ensuring timely action is taken in response to concerns and issues. BANA India Operational Risk tolerance threshold is also included as part of BANA India Risk Appetite Metric.

- Strategic risk is the risk resulting from incorrect assumptions about external or internal factors, inappropriate business plans (e.g., too aggressive, wrong focus, ambiguous); ineffective business strategy execution; or failure to respond in a timely manner to changes in the regulatory, macroeconomic, or competitive environments in the geographic locations in which we operate (such as competitor actions, changing customer preferences, product obsolescence and technology developments).
- Liquidity risk is the inability to meet expected or unexpected cash flow and collateral needs while continuing to support our businesses and customers under a range of economic conditions. The primary objective of liquidity risk management is to ensure that BANA India can meet expected or unexpected cash flow and collateral needs while continuing to support our businesses and customers with the appropriate funding sources, under a range of economic conditions. The Branch uses Liquidity Risk Limits and Risk Indicators such as Liquidity Coverage Ratio, Leverage Ratio, Statutory Liquidity Ratio, Cash Reserve Ratio, Net Stable Funding Ratio, Loans to Deposit Ratio etc. to manage liquidity risk within risk appetite, identify a potential change in the Branch's risk profile, and ensure the amount of liquidity maintained at the Branch remains prudently sized under baseline and stressed conditions
- Reputational risk is the risk that negative perceptions regarding BANA India's conduct or business practices may adversely impact its profitability or operations. Reputational risk may result from many of the bank's activities, including those related to the management of strategic, operational, compliance and credit risks. As a result, the potential impact to the bank's reputation of all our activities and all risks we face is evaluated. Reputational risk may arise from negative perception on the part of key stakeholders (e.g., customers, counterparties, investors, regulators, rating agencies), scrutiny from external parties (e.g., politicians, consumer groups, media organizations) and the ongoing threat of litigation. These reputational risk events could adversely impact the bank's financial standing through an inability to maintain or establish business relationships.
- Compliance risk is the risk of legal or regulatory sanctions, material financial loss or damage to the reputation
  of the Bank arising from the failure of the Bank to comply with the requirements of applicable laws, rules,
  regulations, related self-regulatory organizations' standards and codes of conduct. Bank of America is
  committed to complying with applicable laws, rules and regulations governing the processes and activities
  of our front-line units and control functions in the jurisdictions in which we operate. Bank of America has no
  appetite for accepting compliance risk.
- Interest Rate Risk in Banking Book (IRRBB) refers to the potential adverse financial impact on the Bank's net interest income from changes in interest rates. Due to the fundamental nature of its business, the Bank carries various interest sensitive assets and liabilities in its balance sheet. This exposes the Bank to risk on from changes in interest rates. These assets and liabilities essentially reside in the banking book. In other

### Basel III Pillar 3 Disclosures

words, IRRBB refers to the risk associated with interest rate sensitive instruments that are not held in the trading book of the Bank. Interest rate risk in the trading book is covered in the market risk section.

• Credit concentration risk arises due to imperfect diversification of credit exposures in two ways. One, by having very large exposures to a small set of obligors due to which, default by a big customer could result in a huge loss. This is known as name (single/group) concentration risk. Second type of concentration is due to excessive exposure to a particular industry sector. It is observed that defaults in a particular industry sector are generally correlated. Hence, if an industry is under a severe recession, it could result in multiple defaults leading to huge losses.

#### Other Risks

#### Securitization Risk

It is not one of the primary business activities of BANA India to enter transactions either to securitize and sell its loans or to buy securitized loans from any other bank. The Bank, as of September 30, 2023, does not have any such investments nor has it securitized any of its assets.

- **Settlement Risk** arises out of exposures on counterparties during the settlement of a deal when the Bank has performed its obligation in the contract and the counterparty is yet to perform its part (either delivery or payment). It is of transient nature; and may arise from counterparty default, operational problems, market liquidity constraints and other factors.
- **Pension obligation risk** is the risk of a shortfall of pension funds available in the future to meet pension obligations for its eligible employees. The Bank provides for its pension liability, which is a defined contribution scheme, for all its eligible employees.
- Model Risk is the potential for adverse consequences from decisions based on incorrect or misused model output and reports. The Enterprise Model Risk Policy ("EMRP") provides comprehensive guidance for understanding monitoring and managing model risk at Bank of America. The EMRP is consistent with applicable rules and regulations and establishes a framework of corporate responsibilities and standards for effectively managing model risk across the enterprise.

#### Risk of Under-estimation of Credit Risk under the Standardized Approach

The use of standardized approach for calculating the Pillar 1 capital requirement in respect of credit risk is a conservative approach given the portfolio primarily consists of corporate customers with strong credit profiles and the credit risk in the portfolio is well managed by the credit risk management processes in place.

The Bank computes credit exposure for market related off balance sheet products using the Current Exposure Method (CEM) and it captures the risk contained in the transactions that give rise to Counterparty Credit Risk (CCR) appropriately and satisfactorily

## Basel III Pillar 3 Disclosures

#### - People risk assessment:

Considering the business profile and activities of the bank, the risk that business objectives will not be met due to human resource deficiencies is considered low. The bank has a strong focus on talent acquisition and succession planning as also on ensuring effective backups, which mitigates the impact on business due to changes in key positions. The annualized turnover rate and the capacity utilization (# Open positions/Total headcount) indicates a good level of stability and very limited bandwidth constraints. The number of conduct risk violations have been low and there has not been any history of internal frauds within the bank. There is a thrust on training and development which also ensures staff awareness and understanding on key policies, laws and regulations related to information privacy and protection, anti-money laundering, the risk framework, emergency preparedness, among others.

#### - Technology risk assessment:

The bank is reliant on global systems that are time tested and robust and the risk that arises from systems and/or tools that are deficient, unstable and/or overly complex is low. The client interface is automated and the processing capabilities with underneath reporting functionalities are well established. The bank's loss history is not material and there haven't been too many significant events over the last 3 years that are attributable to system failures.

#### **Risk Governance**

BANA India has the following senior management level local committees or groups for risk governance.

#### Local Management Team ("LMT")

The LMT is chaired by the Country Executive Officer of the Bank. It is the primary body which provides strategic direction to the Bank and ensures compliance with regulatory requirements and the internal policies of the Bank. It is responsible for branch governance and oversight of branch operations. It is also responsible for reviewing and approving new business and products. It reviews the country performance with respect to strategic objectives. The LMT holds meetings at least once in two months or more frequently if required. The LMT reviews and approves the ICAAP on an annual basis or upon any revision in the interim.

#### Asset Liability Council ("ALCO")

The ALCO is chaired by the Country Executive Officer of the Bank. It provides management oversight of the branch's balance sheet, capital, liquidity management and stress testing activities, consistent with the Bank's overall risk appetite for balance sheet, capital, liquidity management and stress testing. It also provides review and, as appropriate, approval of the branch-specific policies, processes, and contingency funding plans, as requested by the Council or required by regulation. The ALCO holds meetings four times in a

### Basel III Pillar 3 Disclosures

financial year or more frequently if required. The ALCO reviews and approves the ICAAP on an annual basis or upon any revision in the interim.

#### Risk Management Committee ("RMC")

RMC is independently chaired by the Chief Risk Officer. RMC serves as an oversight body to provide strategic direction for a progressive risk management system and policies & strategy to be followed to mitigate the risks associated with the business. RMC comprises senior management of the Bank and representatives from front line units and relevant control & support functions. RMC meets at least on a quarterly basis.

#### **Customer Service Committee ("CSC")**

Customer Service Committee ('CSC') is responsible for activities relating to customer service and client services issues. CSC meets four times in a year. The committee is chaired by Head - Banking Operations.

#### **Audit Council**

The Audit Council assists LMT in exercising oversight of the effectiveness of the Bank's system of internal controls and policies and procedures for managing and accessing risk, integrity of the financial statements of the Bank, and compliance by the Bank with legal and regulatory requirements. The Council also provides direct oversight over the audit function. The Audit Council meets at least four times in a year.

The Audit council is mainly responsible for:

- Providing direction and overseeing the operation of the audit function in the Bank,
- to determine scope of concurrent audit
- Following up on issues raised in LFAR and discussing the financial statements
- Follow up on all the issues/concerns raised in the inspection reports of RBI

#### **Technology Steering Committee ("TSC")**

The TSC is chaired by the Chief Information Officer ("CIO"). The Technology Steering Committee (TSC) oversees projects in partnership with the Regional / Global Technology and other Functional teams across the Bank including common infrastructure or other projects cutting across businesses or support groups. The TSC conducts meetings at least once every quarter or more frequently if required.

The TSC is mainly responsible for:

- To assist the Executive Management in implementing Information technology ("IT") Strategy that has been approved by the by global/regional and local management forums,
- Setting project priorities, assessing strategic fit for Information Technology ('IT') proposals and reviewing critical project status and milestones,
- Monitoring IT Governance, project risk, technology operational risks and control processes
- Providing regular updates to the India LMT on significant Technology matter

#### Returns Governance Group ("RGG")

Returns Governance Group (RGG) was formed based on guidance by RBI in 'Approach Paper on Automated Data Flow from Banks to Reserve Bank of India (Nov 2010) and guidance on Supervisory Program for Assessment of Risk and Capital (SPARC). RGG is the governance body responsible for providing oversight to

## Basel III Pillar 3 Disclosures

all regulatory submissions, including Risk Based Supervision. RGG, as required by RBI comprise of representatives from Compliance, Business, Technology, etc. and perform the following roles.

- Act as Vigilante and Custodian and review the final submissions under RBS prior to submission to RBI
- Ensure timely and consistent submission of returns to RBI.
- Ensuring that the metadata is as per the Reserve Bank definitions and be an escalation point for any issues or errors relating to the regulatory reports / returns submitted to RBI.
- Prioritizing various returns and change request for any new/changed requirement/s by Reserve Bank and handling ad-hoc queries relating to RBS and CIMS.

#### Credit Approval Council ('CAC') -

CAC serves as a body for according credit sanction to high value proposals (defined as those requiring Level 2 approval as per the Wholesale Credit and Risk Approval Authority Grid) for the Bank. This is in accordance with RBI notification DBR.BP.BC.No.65/21.04.103/2016-17 on 'Risk Management Systems – Role of the Chief Risk Officer (CRO)'. The council will also review recommendations on identifying Willful Defaulters and Non-Cooperative Borrowers, annually review NPAs & exposure strategy and identify any other actions required in accordance with internal policies.

### Table DF-3: Credit Risk: General Disclosures

#### I. Qualitative disclosures

Robust risk management policies and procedures are laid out in the Global Corporate & Investment Banking Risk Policy. It is supplemented by the Credit Compliance Manual. Written policies, procedures, standards, and guidelines are updated on a regular basis to provide a clear direction to officers for meeting the requirements for which they are accountable. Approval authority is vested via an Approval Grid which takes into account the quantum, internal risk rating and nature of exposure and the position/experience of the approver.

BANA India manages credit risk to a borrower or counterparty based on its risk profile, which includes assessing repayment sources, underlying collateral, if any, and the expected effects of the current and forward-looking economic environment on the borrowers or counterparties. Underwriting, credit management and credit risk limits are proactively reassessed as a borrower's or counterparty's risk profile changes. As part of the overall credit risk assessment of a borrower or counterparty, credit exposures are assigned a risk rating and are subject to approval based on defined credit approval standards. High Value Proposals are subject to approvals by Credit Approval Council ("CAC"). Subsequent to loan origination, risk ratings are monitored on an ongoing basis. If necessary, risk ratings are adjusted to reflect changes in the financial condition and cash flow of a borrower or counterparty.

## Basel III Pillar 3 Disclosures

BANA India follows the policy of internal rating on a scale of Risk Rating ("RR") 1-11, and the RR is regularly monitored. Exposures with RR of 8 or worse (criticized assets) are subject to additional scrutiny and monitoring. Credit risk appetite metrics are monitored as part of the BANA India risk appetite metrics

Unhedged Foreign Currency Exposure ("UFCE") of the borrower is an area of risk for the individual entity as well as for the entire financial system; as entities who do not hedge their exposure may incur significant losses due to exchange rate movements, which in turn can reduce their capability to service the loans taken from the banks. In line with the extant RBI guidelines on UFCE, BANA India has put in place a process to ascertain the amount of UFCE, estimate the extent of likely loss and riskiness due to UFCE, and provide for incremental capital & make incremental provision, as warranted.

In order to address concentration risk in banking industry the RBI has issued 'Guidelines of Enhancing Credit Supply' requiring banks to create additional provision and also apply additional risk weights on specified borrowers effective April 01, 2018. BANA India has put in place a process to ensure compliance with requirements of the said guidelines/directions.

#### Norms for determining when to classify various types of assets as non-performing

- Term loans are treated as non-performing if the interest and/or installments of principal remain overdue for a period of more than 90 days.
- Cash credits & overdrafts are treated as non-performing if the accounts remain out of order for a period of more than 90 days.
- An account will be treated "out of order" if the outstanding balance remains continuously in excess of the sanctioned limit/drawing power for 90 days. In case where the outstanding balance is less than the sanctioned limit/drawing power, but there are no credits continuously for previous 90 days period or credits are not enough to cover the interest debited during the same period, these accounts will be treated as out of order.
- Bills purchased/discounted are treated as non-performing if the bill remains overdue and unpaid for a period of more than 90 days.
- Any overdue receivables representing positive mark-to-market value of a foreign exchange and interest rate
  derivative contracts will be treated as non- performing asset if these remain unpaid for 90 days or more,
  upon becoming due
- Any other facility will be treated as non-performing if any amount to be received remains overdue for a period of more than 90 days during the financial year

**Note: Overdue:** Any amount due to Bank under any credit facility is 'overdue' if it is not paid by the due date.

## Basel III Pillar 3 Disclosures

### II. Quantitative disclosures

#### a. Total Gross credit exposures

INR Million	30-Sep-23	31-Mar-23
Fund Based	506,173	420,832

## Basel III Pillar 3 Disclosures

## Table DF-4 - Credit Risk: Disclosures for Portfolios Subject to the Standardised Approach

#### I. Qualitative disclosures

The Bank adopts the following basis for assignment of risk weights for different categories of counterparties:

#### a. Scheduled Banks including foreign bank branches in India:

The bank has applied risk weights on exposures to scheduled banks for the purpose of Pillar 1 calculation in line with Basel III regulations as prescribed by RBI.

#### b. Foreign Banks:

Ratings for foreign banks have been sourced from websites of Fitch, Moody's and Standard & Poor's. The bank has applied risk weights relevant to the ratings assigned by international credit rating agencies as prescribed by RBI. In case of unrated exposures, bank has applied risk weights as prescribed by RBI guidelines.

#### c. Corporates:

Where the obligors have obtained rating of the facility from any of the accredited credit rating agencies viz., Credit Analysis & Research Limited (CARE), CRISIL Ratings Limited, ICRA Limited (ICRA), India Ratings and Research Private Limited (Fitch), SME Rating Agency of India Ltd. (SMERA) as specified by the RBI, the Bank has applied the risk weights relevant to the ratings assigned by the credit rating agencies. Unrated corporate exposures have been risk weighted as per extant RBI quidelines.

RBI has prescribed following domestic rating agencies – Acuite , CARE, CRISIL, ICRA, India Ratings, INFOMERICS. International Rating agencies – FITCH , Moody , Standard & Poor

#### II. Quantitative disclosures

- Aggregate amount of securitization exposures retained or purchased subject to Comprehensive Risk Measure for specific risk: Nil (March 31, 2023: Nil)
- Aggregate amount of securitization exposures retained or purchased subject to securitization framework for specific risk broken into different risk weight bands: **Nil** (March 31, 2023: Nil)
- Aggregate amount of capital requirements for the securitisation exposures subject to securitisation framework: **Nil** (March 31, 2023: Nil)
- Securitisation Exposures deducted entirely from Tier 1 capital, credit enhancing Interest Only Strips (I/Os) deducted from total capital, and other exposures deducted from total capital: **Nil** (March 31, 2023: Nil)

## Basel III Pillar 3 Disclosures

## Table DF-7: Market Risk in Trading Book

#### I. Qualitative disclosures

Market risk is the risk of loss due to changes in the market values of the Bank's assets and liabilities caused by changing interest rates, currency exchange rates, and security prices. Market risk is inherent in the Bank's operations and arises from both trading and non-trading positions. Trading exposures represent positions taken in a wide range of financial instruments and markets which expose the Bank to various risks, such as interest rate risk, foreign exchange risk, etc. The Bank manages these risks by using trading strategies and other hedging actions which encompass a variety of financial instruments in both the cash and derivatives markets.

Key market risk exposures are assessed at both specific and aggregate levels. At the specific level, market risk sensitivities are assessed by evaluating the impact of individual risk factors such as interest rates and foreign exchange. At the aggregate level, market risk is assessed using two key measures, which are Value-at-Risk ("VaR") and 10 Day Stressed Value at Risk ("SVaR").

VaR is a statistical measure of potential portfolio market value loss resulting from changes in market variables, during a given holding period, measured at a specified confidence level. The Branch uses historical simulation approach for VaR and it is calculated over a one-day holding period at a 99% confidence level, using three years of historical data. The performance of VaR model is monitored through daily back-testing and is performed at both Entity and Line of Business (LoB) level. SVaR is a form of stress test and it is calculated for the most volatile 1 year period of the historical period going back to 1/15/2007, averaging expected loss from 7 worst days of the volatile year. This metric uses a 10 day holding period. Both these measures are monitored as a part of the BANA India Risk Appetite Metrics.

VaR and SVaR are supplemented with stress tests, which are performed to assess extreme tail events or shocks. The stress tests are designed to highlight exposures to unlikely but plausible events or extremely volatile conditions, both hypothetically and historically.

#### **Market Risk Management Architecture**

The market risk function is independent of the front office and monitors all prudential limits governing trading activities and reports exceptions to senior management.

#### **Market Risk Management Control**

Market risk of the Branch is primarily managed through establishing and monitoring limits. Investment policy and FX/derivatives policy of the Branch (or BANA Mumbai) lists the applicable limits and approval processes.

Market Risk Management utilizes a suite of reports which assess risk on a daily basis. These reports are distributed to Senior Management on daily basis. Limit excesses, limit changes (temporary, or permanent) are communicated

## Basel III Pillar 3 Disclosures

to Senior Management, as well as to relevant forum such as the LMT, Risk management Committee and the ALCO where applicable.

#### **Market Risk Management Policies and Procedures:**

The Market Risk Management is guided by market risk policies and guidelines. Global market risk management policy is in place and is followed. The policy describes how market risk is managed by establishing the key market risk measures, defining roles and responsibilities and describing key monitoring processes in place. In addition, the Investment policy and FX/derivatives policy of the Branch lists the applicable limits and approval processes.

The market risk capital requirement is expressed in terms of two separately calculated charges:

- General market risk charge from the interest rate risk in the portfolio in different securities or instruments.
- Specific risk charge for each security, which is designed to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer.

For regulatory capital, the requirements for general market risk are designed to capture the risk of loss arising from changes in market prices and interest rates. The capital charge is the sum of four components:

- the net short or long position in the whole trading book.
- a small proportion of the matched positions in each time-band vertical disallowance.
- a larger proportion of the matched positions across different time bands horizontal disallowance.
- a net charge for positions in options.

The general market risk charge is measured by using the modified duration method. Foreign exchange open positions are considered at higher of limit or actual.

#### II. Quantitative disclosures

## Basel III Pillar 3 Disclosures

### Table DF-8: Operational Risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events.

Operational Risk Events: inadequate or failed internal processes, people, systems and external events may result in unexpected or undesired consequences including a financial loss, an unexpected gain, a near miss and/or an opportunity cost (lost future revenue). The events associated with these unintended and/or undesired consequences are termed as operational risk events.

Operational Loss: an operational loss is the recorded financial consequence (excluding insurance reimbursements or tax effects) resulting from an operational loss event, including all expenses associated with an operational loss event except for opportunity costs, foregone revenue, and costs related to risk management and control enhancements implemented to prevent future operational losses. Operational loss events can also result in unintended financial gains. BAC classifies operational losses using the Basel II categories and definitions: Internal Fraud; External Fraud; Employment Practices and Workplace Safety; Clients, Products, and Business Practices; Damage to Physical Assets; Business Disruption and System Failures; and Execution, Delivery, and Process Management.

BANA India manages the operational risks of its business activities using the enterprise-wide Operational Risk Framework. Enterprise Operational Risk policies, processes, tools, and standards are implemented by the Businesses/ECFs with Oversight from the Independent Business/ECF Risk Teams (Regional Function). Each have a quality assurance role and through direct action or Oversight, these stakeholders are collectively responsible for execution of the Operational Risk Program requirements, achievement of risk management objectives, and ensuring timely action is taken in response to concerns and issues.

#### **Governance of Operational Risk**

Operational risk is managed by all employees as part of our day-to-day activities. Front line units and control functions own operational risk and are responsible for monitoring, assessing and testing the effectiveness of controls, while continuing to identify, escalate, debate and report operational risks. Front line units / control functions may have business Oversight or control teams that support business leaders in the implementation of the program.

The Operational Risk management function at Bank of America (BAC) is independent of front-line unit / control function and is responsible for designing the program and overseeing its implementation and execution in accordance with the Policy and its supporting Standards. Operational Risk Teams are also responsible for objectively assessing, challenging and advising the front-line units / control functions on operational risk.

Governance of BANA India's operational risk is accomplished through formal Oversight by the BAC Board, the CRO and through LMT and risk Oversight groups aligned to the BAC's overall risk governance framework and practices.

## Basel III Pillar 3 Disclosures

#### **Risk Management Process**

BAC's Operational Risk Management Program has been built around ten interrelated requirements that are set out in the Operational Risk Management - Enterprise Policy, which also specifies the responsibilities and accountabilities of the first and second lines of defense. These requirements work together to drive a comprehensive risk-based approach for the proactive identification, management, mitigation and escalation of operational risks throughout the Company. These ten core requirements are:

- 1. Operational Risk Appetite.
- 2. Key Risk Indicators (KRIs)
- 3. Risk and Control Self-Assessment (RCSA)
- 4. Scenario Analysis
- 5. Internal Operational Loss Event Data (ILD)
- 6. External Operational Loss Event Data (ELD)
- 7. Quality Assurance (QA) Program
- 8. Operational Risk Coverage Plans
- 9. Operational Risk Reporting and Escalation
- 10. Operational Risk Capital Model Oversight

Certain elements of BAC's operational risk program may only be performed at global level and/or at regional level.

While BANA India has adopted 'Operational Risk Management - Enterprise Policy' which establishes and defines the requirements and accountabilities for managing operational risk at the Bank, the India Operational Risk Policy (IORP) was developed and approved at the LMT in Oct 2019 and is periodically reviewed. IORP is created as a supplement to the Enterprise Policy to bring out only those aspects of the extant regulations which are additionally applicable to the Bank's activities in India. The Enterprise Operational Risk Management Policy and the IORP will apply to all the branches of Bank of America, N.A., operating in India ("BANA, India" or "the Bank"). The Bank globally has merged Compliance and Operational Risk functions in order to drive operational excellence within Bank of America. Combining the two has resulted in better linkages between compliance failures and operational losses and enable us to better manage compliance and operational risks through combined taxonomies and tools, a common framework, holistic view on issues related to people, process, technology, and external events, whether they result from compliance failures or losses from specific operations. However, in light of the RBI guidelines on management of Operational Risk, while the integrated teams will continue to streamline and leverage on the common processes, the India Chief Risk Officer will continue to have oversight and supervisory responsibilities over the India Operational Risk function and as such the BANA India Operational Risk Officer will also continue to provide necessary updates directly to the Risk Management Committee of the Bank in India. BANA India Operational Risk tolerance threshold is also monitored as part of BANA India Risk Appetite Metrics

## Basel III Pillar 3 Disclosures

### Table DF-9: Interest Rate Risk in the Banking Book (IRRBB)

#### I. Qualitative disclosures

Interest Rate Risk in Banking Book (IRRBB) refers to the potential adverse financial impact on the Bank's net interest income from changes in interest rates. Due to the fundamental nature of its business, the bank carries various interest sensitive assets and liabilities in its balance sheet. This exposes the Bank to risk on from changes in interest rates. These assets and liabilities essentially reside in banking book. In other words, IRRBB refers to risk associated with interest rate sensitive instruments that are not held in the trading book of the Bank. Interest rate risk in the trading book is covered in the market risk section

Presently the Bank uses the following tools for managing interest rate risk:

**Gap analysis:** The interest rate gap or mismatch risk is measured by calculating gaps over different time intervals at a given date. This static analysis measures mismatches between rate sensitive liabilities ("RSL") and rate sensitive assets ("RSA"). The report is prepared monthly by grouping rate sensitive liabilities, assets and off-balance sheet positions into time buckets according to residual maturity or next re-pricing period, whichever is earlier. The difference between RSA and RSL for each time bucket signifies the gap in that time bucket. The direction of the gap indicates whether net interest income is positively or negatively impacted by a change in interest rates and the magnitude of the gap helps in assessing the change in net interest income for any given interest rate shift. The interest rate sensitivity/gap reports are reviewed by the ALCO on a regular basis and is also monitored as part of the BANA India Risk Appetite Metrics

**Earnings at risk ("EaR"):** The interest rate gap reports mentioned above indicate whether the Bank is in a position to benefit from rising interest rates by having a positive gap (RSA > RSL) or whether it is in a position to benefit from declining interest rates by having a negative gap (RSL > RSA). EaR measures the change in NII over a one year time horizon for various levels of parallel shift in interest rates.

**Economic value:** Change in the interest rates have a long-term impact on the capital position of the Bank, as the economic value of the Bank's assets, liabilities and off-balance sheet positions get affected by these rate changes. The Bank applies a modified duration approach and monitors impact of various levels of parallel shift in interest rate curves on the capital position. The interest rate sensitivity/gap reports are reviewed by the ALCO on a regular basis.

## Basel III Pillar 3 Disclosures

#### II. Quantitative disclosures

The increase / (decline) in earnings and economic value (on a pre-tax basis) for an upward/downward rate shock broken down by currency is as below

#### a. Impact on net interest income over the next 12 months (earnings perspective)

	30-S	ep-23	31-Mar-23

#### Note:

RBI has issued final guidelines on Interest Rate in Banking Book (IRRBB) in Feb 23 but the effective date for implementation is yet to be communicated , the bank will present results basis the new guidelines once the same is made effective.

## Basel III Pillar 3 Disclosures

## Table DF-10: General Disclosure for Exposures Related to Counterparty Credit Risk

#### I. Qualitative disclosures

## Discussion of methodology used to assign economic capital and credit limits for counterparty credit exposures

A credit approval document is used to analyze the counterparty's creditworthiness, document transaction structure and risk mitigation, and approve the Traded Products limit(s). Specific requests, including limit structure and attributes is also included in the credit approval document. BANA India adopts standardized model which does not calculate economic capital for counterparty credit exposures.

#### Discussion of policies for securing collateral and establishing credit reserve

Collateralization is one of the key credit risk mitigation techniques available in the market. The term "Collateral" means assets pledged as security to ensure payment or performance of an obligation. When facing derivative counterparties, BAC enters into master netting arrangements and, in appropriate circumstances, collateral arrangements which provide in the event of a customer default, the right to liquidate collateral and the right to offset counterparty's rights and obligations. BAC also monitors the fair market value of the underlying securities used as collateral, including accrued interest, and, as necessary, requests additional collateral to ensure that the relevant transactions are adequately collateralized. BANA India makes appropriate provisions for credit risk as per regulatory guidelines.

#### Discussion of policies with respect to wrong-way risk exposures

Transactions that include significant positive correlation between the performance of the counterparty and the exposure profile of the underlying product are called Wrong Way Risk ("WWR") trades. The BAC Wrong Way Risk Policy outlines the characteristics of WWR trades, and describes the approval escalation requirements and associated monitoring and reporting of WWR exposure.

## Discussion of the impact of the collateral the bank would have to provide given a credit rating downgrade

As per local contractual agreements, BANA India is not required to post any collateral given a credit rating downgrade.

## Basel III Pillar 3 Disclosures

### Net Stable Funding Disclosure as at Sep 30,2023

The Basel Committee on Banking Supervision (BCBS) had introduced the Net Stable Funding Ratio (NSFR) in order to ensure resilience over a longer- term time horizon by requiring banks to fund their activities with more stable sources of funding. NSFR is defined as the amount of available stable funding relative to the amount of required stable funding. "Available stable funding" (ASF) is defined as the portion of capital and liabilities expected to be reliable over the time horizon considered by the NSFR, which extends to one year. The amount of stable funding required ("Required stable funding") (RSF) of a specific institution is a function of the liquidity characteristics and residual maturities of the various assets held by that institution as well as those of its off-balance sheet (OBS) exposures.

The NSFR guidelines became effective Oct 1, 2021, and the bank has been monitoring the ratio at daily frequency starting Oct 1 and reporting to RBI on a quarterly basis. The minimum regulatory requirement as set out in the extant RBI guidelines is 100%.
